## 1 <u>ABSTRACT</u>

A medical port for an emergency safety resuscitator having a collapsible bag with an outlet. An adapter has a first end available for attachment to, and communication with, the outlet of the collapsible bag. A second end of the adapter attaches to a first aperture of a tube having three apertures. The second aperture of the tube is releasably covered by a self-sealing membrane. And the third aperture of the tube is available for connection either to a mask or an endotracheal tube.
